C3J 不含月铃姐妹

题目描述

n 个格子，每个格子需要被染成一种颜色，每次可以染色覆盖一个连续区间，最少需要多少次染色可以达成目标

数据范围

$1 \le n \le 100$

大致可知是一个 $O(n^3)$ 的区间dp

解题思路

首先，考虑任意两个染色区间是否会出现**重叠但不包含**的情况

由于这两次染色一定存在先后顺序，对于交集区间，第一次的染色无用，可以不染

- 故经过简化可知一定存在等价的一种染色方案里，每个染色区间要不**不相交**，要不一定是**包含关系**，即最后的区间可以表示为一棵**树**

考虑区间dp，$dp_{i,j}$ 表示完成区间 $[i,j]$ 的染色要求需要的最少染色次数

若 $col_i == col_j$，在染色 i 的时候可以顺便把 j 位置也染色了，反之亦然

$$f_{i,j} = min\{f_{i+1,j}, f_{i,j-1}\}$$

若 $col_i \neq col_j$，由于满足区间没有部分覆盖的关系，所以一定存在一个 k 可以将区间 $[i,j]$ 的染色分为两个子问题 $[i,k]$ 与 $[k+1,j]$

$$f_{i,j} = min\{f_{i,k} + f_{k+1,j}\}$$

代码实现

```
#include <bits/stdc++.h>

using namespace std;

using ll = long long;
using db = long double;  // or double, if TL is tight
using str = string;
using u32 = unsigned int;
using u64 = unsigned long long;
using u128 = unsigned __int128;
```

```cpp
using pii = pair<int, int>;
using pll = pair<ll, ll>;
using pdd = pair<db, db>;
#define fi first
#define se second

#define vc vector
using vi = vc<int>;
using vb = vc<bool>;
using vll = vc<ll>;
using vd = vc<db>;
using vs = vc<str>;
using vch = vc<char>;
using vpii = vc<pii>;
using vpll = vc<pll>;
using vpdd = vc<pdd>;
using vvi = vc<vc<int>>;
using vvll = vc<vc<ll>>;
using vvch = vc<vc<char>>;
using vvb = vc<vc<bool>>;
using vvpii = vc<vc<pii>>;
using vvpll = vc<vc<pll>>;

const int mod = 998244353;  // 1e9 + 7;
const int INF = 0x3f3f3f3f;
